What was the information you were looking for? Describe the labels you chose and why. Also include at least one screenshot of the webpage you are using and show where is the information you are looking for.

I am looking for the motorcycle price. Sometimes you can read it from the title, sometimes not.

What kind of tags did you tag your data with? Explain your choices.
I use part of speech tag. Use part of speech can easily rule out lots of impossible tokens such as adjective, verb. These are not my concern here. Numbers are tagged with "CD".

Report your classifier's precision, recall and F-1 measure.

	precision	recall	f1-score	support
P	0.92	0.88	0.90	26

Why did your classifier perform well (or not satisfactorily)?
I am satisfied with my result with similar high precision and recall. Some samples are not well predicted because they may put different prices in one sample. For example one price used to indicated when the first time he bought the motorcycle and other are the one it use to sell the motorcycle.
